**(54) ATTACHING  
MECHANISM FOR  
MEMBER**

(57) Abstract:

**PURPOSE:** To provide a member attaching mechanism through which the member can be attached by a simple operation.

**CONSTITUTION:** The outer periphery of a member 1 is provided with a pair of regulating parts 4 to form the movable domain D of an attached member 2, and the movable domain D is arrangedly provided with an energizing means 5 whose width at the time of extension is set up to be a little wider than residual width obtained by subtracting the thickness (d) of the attached member 2 from the width of the movable domain D, and at least one of a pair of regulating parts 4 is formed so that it may be attached to the member 1 from an outside.
